TECHNICAL DESCRIPTION

The electromagnetic valve DLK22KV has been designed and realized for its use on various kind of production machines operating at high speed: its design and versatility make it ideal for any applications that require the use of dispensing valves.

It's an high-speed dispenser of low and medium viscosity glues, adhesives and fluids (max 2500 mPas). It can be dispense glue dots. It is controlled by a Zator's microprocessor control or by an instrument of external control after testing and approval of Zator company.

Full stainless steel valve, zero cavity short nozzle (KV), needle with ceramic ball. The micrometric adjustment allows a fine control of dot size.
